The question really applies to all of us, since R, RStudio, etc. have a lot of similarities. As far as I can see, RStudio is just the GUI interface for R. Does that mean that if I use RStudio, I am actually using R? If not, which is the program (R or RStudio) I actually use to do statistical calculations? A: R Studio is a product for managing and sharing R projects, primarily from within the R environment, the IDE (Integrated Development Environment) is for programming in R. If you use the Anaconda package manager to install R, the IDE is called R Studio. If you use other tools for R installation, such as the CRAN package manager, then you use the R-console program (or shell) to do your R work. A: RStudio is a GUI for running R scripts. It is a full-featured development environment for R, and includes a great many useful facilities for running, debugging, and documenting R code. There is a direct R interpreter embedded in the RStudio IDE. To interact with the embedded R interpreter, one needs to use the mouse, or invoke some keyboard shortcuts. What if that "new" business was your old friend? Would you go? GQ Magazine has just published an article featuring New Orleans's Brennan's Steakhouse and their recent partnership with Etapes Wellness. If you haven't heard of Brennan's, it's pretty legendary and has been named one of the top American restaurants by Conde Nast Traveler and the New York Times. (It also got me addicted to food!) The catch? They've made their "house secret" the perfect spa for your travels. When you purchase dinner at Brennan's, you can get a one-night stay at Etapes for the same price. How great is that? What is Etapes? This is the story: You travel the world for a week, you choose a destination, and you stay at Etapes, a boutique wellness resort in the Blue Ridge Mountains. It's a gorgeous setting, but it's not a spa: it's 100% natural, a living space where you're taught how to nourish yourself in the best way for your body, mind and soul. Etapes organizes more than 50 small group retreats every year in destinations around the world. They work with professional chefs to develop detox retreats, and culinary retreats for people who want to learn or deepen their skills. They teach people how to eat more healthily, and how to live more effectively (and eat more at restaurants!). And
