The first step towards capturing the way football is played in-game is the Player Impact Engine. The second is the ball physics, on-pitch interaction, player collisions, ball speed and player acceleration. The biggest new tech addition is the Defense Impact Engine. This uses 5K of real-time data to track and predict defensive behaviors to provide more appropriate challenges and context-sensitive decisions while in possession. Look at some new ways players can be controlled in-game in the video below: [FIFA 20 - FUT Highlights] Deep-V Feature Update Introduces new build depth numbers to FUT, allowing players to make more accurate style mods. Foul Potency Modification Introduces the "Foul Potency" system which adjusts the influence of the Foul Goal Decision in the penalty-kick and PK stroke-play. This provides four levels of penalty-kick and PK Foul sensitivity. Diagonal Passing Circle Feature Introduces a new, unique ball control technique which provides "more than just passing," allowing players to control the ball in more diverse ways than ever before. The ball will naturally rotate to the player's selected pass direction when a combination of Alt+Left, Alt+Right, R3+Triangle, R3+Circle or R3+X is pressed. Swinging Start Modification Introduces a new input method for players and managers, which enables players to start a possession in a low position and then send the ball out of the backline for an attack. This allows players to use their movement and positioning on the field to create passing options and build attacks. Playing Out of Bounds Modification Adds the ability to play the ball out of bounds by using an Out of Bounds call. This allows players to use their movement and positioning to play the ball out of the backline, or to get around the opposition's defence. Overlap Flags Modification Adds the ability to restart a FUT match, or play a pre-set fixture, when facing a penalty kick or corner kick. This allows managers to restart a game to finish their FUT league campaign or fixtures under the new season format. Dribbling Through the Squares Modification Adds a new way to dribble through the defensive

FIFA is a unique experience. No other football game in the world captures the drama of the sport like FIFA. The technology and features that go into the game push the limits of what's possible in sports gaming, and with FIFA 22 we've made that experience even more intense, realistic and immersive. Did you know? In 2011, FIFA was voted the most popular sports game of all time, ever. Since then, we've released FIFA 14. If you're still playing FIFA 13, you can get FIFA 12, FIFA 11 or FIFA 10. What's New in FIFA 22? Gameplay FIFA 22 brings fundamental gameplay advances to create the most realistic and authentic football experience to date. The new defensive AI has been further developed and now covers all the game's roles, including defensive line, back-line CB/LB, full-back, goalkeeper and defensive midfielders. This will help you get the ball out of danger, and your team will become more solid when you play defensive-minded football. While you'll still have to devise your attacking strategy, you'll be making the most of more passing options and an improved match engine. In addition, we've introduced "FIFA Vision", which will help players see a 360-degree view of the game, providing them with a better awareness of their surroundings. Features FIFA 22 has numerous features that make the game more authentic, engaging and exciting. New Teams The 'all-new' Team of the Season introduced in FIFA 19 is back for FIFA 22, with improved graphics, more players, more options and more content. You'll be able to play as 27 teams, including 11 Olympic National Teams, seven Confederations and eight International National Teams. The 1518 Ballot introduces more world-class teams to play with in FIFA 22, including 12 top league teams. It is now easier than ever to get started in FIFA 22. In addition to the all-new Team of the Season, the PES Institute introduced in FIFA 19 will now be available to all players. To improve the diversity and realism of gameplay, we've created many minor improvements to the game, including the ball, player and ball physics. There are also fundamental improvements to the ball passing accuracy system, the animations, positioning and weight in the new defensive AI system and more. Multiplayer FIFA 22 includes more
