Lightroom 5 is a nice touch app to have, but not one I'd necessarily choose for every job. However, it is a really nice thing to have for personal projects that you don't want to share. I'm not sure how long it will remain a beta release, but I hope it does linger a while. For now, the range of tools is still very impressive, and there are certain features that make it a better choice for photographers with larger projects. That said, there are plenty of features I'd like to see added such as versioning, previews, and an Automator-like workflow. Lightroom would also be a lot more useful if it could use multiple external drives on the fly as tools to import, export, and back up importable files. Of course, that's just wishful thinking. Deep image editing is great, but it isn't going to replace Photoshop when it comes to retouching. Still, there are other things to love about this release. For instance the Vibrancy feature that makes text and objects look more alive. It's a welcome addition. Lightroom 5's Layer Panel also makes it easy to add and cancel custom Layers with comments and changes. In my opinion, that's one thing that's getting a little bit too powerful. I for one have found myself using this tool as a way to exclude layer from undo when making changes. I'm sure this is going to be used for more. In my own workflow, I'm finding it hard to use Layer Panel for what was intended for use as Layers.

Adobe Photoshop lacks a variety of features to help you create advanced effects and textures, but these can be achieved through the use of layers and the layer mask. Layers help break down your image into different areas where you can manipulate content in different ways, while the layer mask lets you edit the color and transparency of a photograph to achieve specific effects. You can also use the blend modes, like Haze, to give a "foggy" feel to your images. **What It Does:** The Layer Masks, Layers, Selections, and Clipping Paths tool lets you apply effects, make selections, copy and paste

layers, crop, resize, merge layers and undo/redo your way through these.

What It Does: The Content-Aware Fill feature allows you to use equal amounts of the foreground and background colors to fill the selected image area with the contents of the background. This can be useful in filling in missing elements when the subject of the image is blowing in the wind and the camera is unable to capture them in their entirety.

What It Does: The Clone Stamp tool is used to erase areas of your digital image that have been selected by another area of the image, or repeated patterns. You can use various styles to select areas of an image to replicate with the Clone Stamp.

What It Does: The Moiré Filter helps to create fascinating visual effects by using the screen's light interference patterns. You can filter out certain colors from your image and cut out information by hand using filters to alter the image. 933d7f57e6

With Share for Review, a collaborative review experience is nothing new. The difference with Share for Review is that the user sharing does not need to own Photoshop, just a Creative Cloud plan, to start sharing and comment. In this example, the photographer may share the file on OneDrive, Dropbox, Box or on a drive attached to an Office 365 email address, and anyone who chooses to share the file to the viewing users becomes a collaborative reviewer. Anyone who is invited to check the file out and comment may be working from a variety of desktop, mobile and other platforms, and the changes they make will update the shared file automatically in real time. The key benefit of this workflow is that the photographer can collaborate with others and walk away so they can continue working in Photoshop while the invited users can leverage the shared instance of the file to make their own edits, and those changes will update automatically in real time. To start sharing an instance of Photoshop file, the collaborating users should get a notification with a link to share the file on, or open the shared file in OneDrive, Dropbox, Box or on a drive attached to an Office 365 email address. Anyone invited to check out a file can start making edits, and all collaborators will see the changes and can make their edits because the changes are happening in real time. If a reviewed user enters a comment during the time the file is being shared, that comment will update the file automatically in the shared repository so all collaborators can see the comment.
