Keymacro is a program to record all the steps taken in a software application, and then play them back using macros created in advance. Keymacro records mouse movements, keystrokes, selection areas, and text. Using a list editor, you can import and then edit keywords and text to associate with a macro. Macros can be created by grouping macros and folders of previous macros, by recording a video, or by using text templates. You can record a new macro by pressing a hotkey. The program includes a clipboard manager which stores all the information of all the recordings, and the application stores it on disk so you can edit them later. You can also make recordings under a new protection system, and recover a recording with the protection password. KEYMACRO Installation: 1. Download the installer file, which includes a list editor, a clip board manager, a protection system, and a set of hotkeys. 2. Go to the folder where the program is installed, double-click on the installer file to start the installation process, accept the terms of the license agreement, and then follow the instructions. 3. The program will start the list editor, and then the clip board manager. Once they are up, the protection system will be displayed, with the list of recorded hotkeys, as well as a virtual keyboard, to insert the recording. 4. Finally, select an entry, and the program will record the action you made, in the order you made them, without stopping the recording process. Keymacro Features: 1. Most of the actions you can make in the software are recorded. When you play them back, they will be performed exactly as you did them. 2. You can create and edit your own list editor. 3. You can also create and edit your own protection system and add hotkeys to it. 4. Record a video of your actions to replay them. 5. Edit the text templates included in the program and create your own. 6. The program stores all the recorded actions in an easy to access format so you can edit them later. 7. You can play the recorded actions with the "Hotkeys" feature. 8. The program also offers "Macros", which are independent actions you can record and then replay on your own. Keymacro Limitations: 1. The list editor and protection system store information on-line so they are not available while the application is running. 2
