Keyboard macros help to automate repetitive tasks, typically by recording them and playing them back at the appropriate time. Reviews Software & Utilities / General Category A cloud-based database with a focus on customizability, Backbox is open source, meaning that it is free to download and use. It contains a lot of features, even more than we can mention in this short review, yet here are a few of the things that caught our attention. General Configuration Once installed, Backbox lets you edit your home screens as well as the Wallpapers, Wallpaper Sizes and Wallpaper Lists. In the Home Screen options, you will find a lot of neat options, such as Date Pickers, Categories and Screensavers, among other things. When it comes to Wallpaper lists, you get the choice to use your current one, select from a list of installed ones or add one of your own. Note that you have to download the Wallpaper to use it. When you go to the Wallpaper list, you'll be presented with four different parts. General Features: Allows you to change the color of the icons, to change their shapes, to remove some of them, or to add a setting. For example, if you want to make one of your home screens a little more intense, all you have to do is click on the color wheel icon. Wallpaper: As expected, shows the current wallpaper, as well as the options available to make it either your current one, or an item from your Wallpaper list. List: Here you can modify the visibility, colors and fonts of each of the items in the list. Note that the icons and fonts for each item can be modified, but the Wallpaper itself cannot. Folder: The name says it all. If you change the name of a folder, the wallpaper will be updated to match it. The Wallpaper editor is a great place to change, for example, an icon's color, size, or background image. The Wallpaper Editor has an extremely intuitive interface and is a breeze to use, especially when you want to edit just one element at a time. Video Player: Here you can play your videos using your wallpaper. You can choose to start playing the video from the beginning or from the point where you left off. You can also modify the playback settings, such as displaying the video's title or only the music. When the movie starts, Backbox will show 2edc1e01e8

Search By Voice

Search by voice is a simple, intuitive browser which lets you navigate the Internet using only your voice. Search by voice is a basic tool that uses online speech recognition to help you browse the Internet using your voice only, with no keyboard involved. It offers support for ten browsers and allows for searches based on clipboard text, making it a flexible tool, in spite of its simplicity. Create an account and activate the Speech feature Having to log in for a simple app like this seems a bit unnecessary, yet it is a thing. However, make sure you pay close attention to the credentials. The app has an unconventional login routine. Creating an account seems to be possible one time on one machine. If you forget the credentials, the app will tell you that you've already had an account, and won't let you make another. This looks like a breaking deal, so be careful. Also, the OS speech recognition function must be turned on for Search By Voice to work. Outdated UI The interface is far from good-looking, but it works. When you launch the app for the first time, the transparent mode will be on, pushing you to believe something is wrong, when it's not. Selecting a browser would be the first step with Search By Voice. Brave, Chrome, Dragon, Epic, Edge, Firefox, Flash Peak, Opera, Safari, and Vivaldi are the browsers one can use. Plug in a microphone and start speaking. Words and phrases are both acceptable, but your diction must be fairly clean, and speaking fast is not advised. All words or phrases can be found in the app's history and reused at will. If you have trouble with your mic, open the Send combo menu and use the clipboard to paste text in the search box. To conclude Search By Voice is not the fanciest speech-to-text tool out there, but its efficiency cannot be argued with. Once you figure out how the account step works and get used to the UI mechanics, you'll quickly become more and more conformable with this particular program.
