I like the improvements to Face Matching, which can find photos of a subject's face and license plates. There's a new Image > Image Size command palette that allows you to zoom in, zoom out, crop, and rotate an image, all easily and simultaneously. The instructions are easy to understand. You can also spend more time with the Analog style, which is a real time saver. You can now rotate the canvas by holding down the ARROW keys. There's a new Create Custom Paths Option, which allows you to create custom shapes. The app also preserves the user's video-editing preferences. In many ways, inserting images in a standard template is a panacea for spinning phrases. By using elements like columns, headers, and even a simple grid to display your content, and then replacing the text with your own copy over the top, you can get some very creative looks in a heartbeat, and further impress your clients. The hugely powerful template tool makes it easy to create gorgeous looking graphics without having to ever write a line of code or spend hours formatting your text. It's possible to have things like headers and footers with the insertion of a single insertion point in the body of the template. GIMP 2.10 now has a preview view. If you go to GIMP—and you should—you can see only a preview of a single layer. That layer can be changed, copied, and moved. It can also have any number of new layers added and removed, combined with any of the other layers in the image. And you can do so all without closing the preview window. Just click "Preview Layers," and GIMP lets you work on a single layer at a time.

As you can see from the above list, Photoshop has a much bigger range of features than Lightroom. However, if what you want to do with your images is limited to just make changes to them, then Lightroom is the way to go. Lightroom's feature set is more targeted at photography and video and the interface is very similar to Photoshop's. To do the same thing in Photoshop, you'll need to download plugins. Lightroom on the other hand merely has standard features that can be found in all of the other Creative Cloud programs. It's a big responsibility to choose what you use for photo editing. Audience, clients, style, and even the quality of your work can all affect your decision. Photoshop is the industry standard. I have had pain after playing soccer and I edit my photos using Photoshop, simply because it is an established program. Sometimes I can see that my Photoshop editing is too much, since I use a lot of layers and tools. It's time-consuming, but I still enjoy it. Our commitment to Photoshop includes supporting the Photoshop team and the team of 250,000 people at Adobe, as well as creative professionals. We will be investing heavily in the future of Photoshop to make sure we can deliver on Adobe's promise of innovation, and help you produce great work for years to come. Adobe Photoshop Camera is a true creator experience with a streamlined workflow for professionals and non-professionals alike. It's simple to use with an intuitive interface.
