Installing Adobe Photoshop is fairly easy, and the steps are well documented. First, you will need to download the software from Adobe's website. Then, open Adobe Photoshop after the download is complete. Once you have the software installed, click on the Edit menu and select Preferences. You will be shown a screen where you can select the resolution of your monitor. On this screen, you can also select other settings for the software. After you finish making the changes, click on File and then Export Settings. In this screen, you can select a file to save the settings to. Once you have the settings file, save it to a safe location that is not part of the Adobe software folder. Next, click on the File menu and select Export Settings to File. Save the file to one of the safe locations you have created. Now, click on File and then Close. Just be aware of the location of the settings file. You will need to import the settings file again before you can begin working on Photoshop.
