With Share for Review, users can collaborate on projects without leaving Photoshop. The feature supports real-time collaboration on large projects, and supports a variety of collaborative tools, including LiveScribe, LiveShare and LiveAttend. When the work is done, the collaborators can choose to save the images or input their edits into a temporary file. The saved images are synced to the original file, and all collaborators with the project have access to the project documentation. A single link to the collaborative file is shared with other collaborators, and they can view and comment on it as needed. Adobe has also revolutionized the way that Photoshop users annotate images with Photoshop Labels. Users can now not only load label templates, but even create them on the fly. If a user is unsure of the type of annotation they require, they can also customize the appearance of their label. The new feature also introduces "Visualize" to Photoshop Labels by allowing users to include hovers and hotspots that let users annotate by tracing over the image. The Photoshop team is always exploring new ways to add value to the product. The ability to work with textures has been a goal in Photoshop since the very first editions. Now, users have a new tool to look at their designs and ideas more clearly, and without distractions from complementary designs that might surround the subject. Simply select a "Freehand Tool" and select a foreground and background texture, and the application will stitch those textures together to make a seamless, well-defined path. Users can even go even further down the road, by adding foreground textures, and decorative effects. You can even use the text tool to create elaborate text.

With Adobe Sensei, Photoshop also introduces an AI-powered tool that enables a single person to do things that would previously have required a team. The tool's innovative learning and adaptive intelligence enable quicker and more accurate selections, to help streamline the editing process and help artists and designers in any field become more productive. Adobe Sensei – a distinct AI feature that can help solve problems in Photoshop - has been available in Adobe's Creative Cloud, Target CC and in some versions of the Creative Suite since 2016. In Photoshop, Adobe Sensei enables artists to select content more quickly with a guided, professional-grade Live Trace tool, and more accurately with a smart one-click Select tool that creates a selection while artists still have the mouse, and moves the tool to the targeted area. It also accurately predicts how artists will want to modify the types of objects in an image, helping artists select and place those objects more efficiently. Additionally, the Beta versions of the Photoshop desktop app now support GPU compositing, which delivers a performance benefit in real time when using real-time effects, perspective adjustment and blending. The Photoshop Beta app also supports machine learning-based image recognition and styles, so users can automatically discover, tag and organize their existing assets. The app's Organizer tab organizes and searches cloud images, making them easier to find and access at any time.
