

Easy Worship 6.10.0 Crack The following is a guide for installing Easy Worship 6 . The invention relates to a video display device comprising a display plane of a cathode ray tube containing a shadow mask arranged between the display plane and an electron gun, having a support for the shadow mask between the electron gun and the display plane. The invention further relates to a method for producing such a video display device. In many video display devices, at least one thin, laminated shadow mask is used between the display plane and the electron gun, for example, a cathode ray tube. This shadow mask is supported by a frame, usually, a frame composed of a plastic material, which frame is fixedly arranged, for example, between the electron gun and the display plane. The frame normally has an opening for the electron gun, into which opening the support of the shadow mask is inserted. Such a conventional shadow mask is the subject matter of EP-A 0,201,442. In the case of conventional video display devices, the shadow mask is supported on its inside by the wall of the frame. For the purpose of attaching the shadow mask to the frame, it is necessary that a relatively large area of the wall of the frame is made available in order to provide a suitably large fixing area. The relatively large area of the frame wall constitutes a weak point of the conventional video display device, so that any mechanical loads, such as strong vibration, which the video display device may be exposed to, lead to damage of the video display device and an immediate failure of the display. It is an object of the invention to improve a video display device of the kind set forth in the opening part of this specification in such a manner that the relatively large fixing area of the wall of the frame is greatly reduced. This object is achieved in the case of a video display device of the invention, as claimed in claim 1, in that the support is of two-fold the size of the shadow mask, that the second part of the support constitutes a wall of the frame which forms an angle with the first part of the support and that the first part of the support is inserted into the frame of a given wall thickness. The invention is based on the idea of constructing the shadow mask support as a frame which is two-fold the size of the shadow mask. The support therefore always requires the same surface in the frame, so that the fixing area is reduced to a third of the value of the fixing area of
