Now that we've gone through the basic tools and functions of Photoshop, let's examine Adobe's new collaborative editing features. Most of these functions are made possible by the AI and Sensei engine, allowing you to work with others online or over e-mail or on a personal level, or even using the latest real-time technology. For massive projects, there's also a new feature that enables you to have a Dropbox or Google Drive share workflows by saving and sharing your entire layout. **ABOVE:** Tapping on a word in the viewport changes the layer with that word to the foreground. Note the layer created automatically. **BELOW:** 99 brushes. New brushes can be added with a free download of Adobe Brainstorm. Adobe's current state in regards to AI is, admittedly, a bit mysterious. They've touted AI features for years, but until recently, different machines with different software packages seemed to perform differently on certain tasks. A number of commenters on this website have stated that they've worked on AI projects with both Photoshop and Lightroom and were never able to get the same editing outcome, whether in AI-enabled modes or non AI modes on the same machine. Adobe has to address this situation in order to maintain confidence for their customers. If you've ever used a manual-paint-over-an-automated-workflow, you've probably found the AI brushes then unsatisfactory. When using AI brushes, you can control the process and the flow of the brush strokes but cannot in any way edit the brush itself. Unfortunately, the AI brushes are a bit disappointing in this department. Some include some of the standard AI brushes, like the Speckle brush (as shown just above) which may have all the edges in the right place but still may be a bit gray or has a speckled quality to it. This is still the case even with the most recent iterations.

Traditional digital products, like runway shows at fashion week, are streamed to millions of people. A hundred years ago, it was impossible to broadcast a live fashion show on TV, but now Instagram, Facebook Live, and Facebook Watch are where fashion industry professionals and everyday users alike love to talk about what they're doing right now. Watching the fashion industry unfold is a great test of how technology can make live streaming more realistic, and how our cameras, editing equipment and social media platforms all evolve. Today, Adobe Photos is evolving to launch as an entirely new app that is more powerful than ever before. The new app includes built-in intelligent features like Adobe Sensei, powered by Adobe AI, that make the discovery, tagging and editing experience faster and more delightful than ever. In addition, the newest working with RAW (Adobe RAW) technology now supports Adobe Presets, and Adobe Post is evolving from a service to a free, subscription service. With today's announcement, Adobe has updated its team sports editing toolset to make team sports editing easier. With the new Adobe Pilot ACE toolset, athletes can edit and share on social media up to five times faster than before, and teams can now automatically harvest training data to provide in-depth analytics. Lavelocity, the agency responsible for NBA content for the U.S., reached out to the team, and the U.S. National Basketball Association's (NBA) Silicon Valley Innovation Lab provided expertise and insights to help refine the toolset.
