has an original feature dedicated to the design of the calendar for business and leisure time, as well as the possibility to configure a particular date based on various circumstances. You can for example schedule the reception of gifts and reminders for other people, indicating that the day is less suitable if the recipient has plans for an important meeting so that you could offer another time. An overview of your schedule can be found; the remaining days are justified using the different categories: work, family, leisure, travel, etc.. The software is as intuitive as you can get: for starters, you can edit your RAW files using a few simple tools such as Levels, Curves, Crop, Rotate, Erase and Selection options. You can even use the full selection mode. The rest is very simple: move your cursor on the picture, and a full-screen button appears, allowing you to zoom and get to image composition.. The interface is far from being straightforward, with plenty of icons and information floating above the canvas. You can choose tabs on the left or right of the window, or at the menu, but here the options are cumbersome. As I said, it is in the image composition that the software shines. You can apply filters: tint, exposure, saturation, and so on. Then you can apply style settings such as layer styles, borders, spot effects and more. If you wish, you can print your image with various choices of paper, and not only the most common A4, but also letter and landscape format. The size can be as big as you want, you can print in 1, 2, 4 or 6 copies, and you can even print several copies at the same time. You can send your image via e-mail or even Facebook or Twitter. The best thing: you can use your own print shop. There are a million ways to print, but all the professionals say that the best option is to use prints directly from a professional shop.

"At Adobe, our goal is to fundamentally change how people work by making technology more effective, simple and focused," said Shantanu Narayen, Adobe chairman and CEO. "With the addition of Share for Review, Delight and new 64-bit engine in Photoshop, we are furthering the mission of working and creating more simply and powerfully." For the first time in Photoshop history, users will have a single location to learn, create, stay productive and collaborate. It appears no matter which desktop browser or Surface you are working with, Photoshop Elements will launch in the browser, while Photoshop will remain the traditional desktop app. As the world's largest creative cloud, Adobe Photoshop brings multi-device and multi-solution workflows to the web. It will be the first image editing platform that works seamlessly and intuitively across tools, operating systems and browsers. The new powerful one-click Delete and Fill tool in Photoshop is really useful for quick manipulation. In a series of shots, it removes both the logos from the top and bottom edges, replacing them with the main text below, creating an elegant display in one action. The new selection improvements are a huge step forward for accurate selection in images. Based on Adobe's previous work in this area, Vision AI has designed deep learning technology to analyze millions of

image patterns to learn what an “edge” looks like and how edges can be selected. Adobe® Reader® software turns pages into seamless images. Whether you work on a small tablet, a bigger desktop screen, or a giant Surface, Adobe Reader makes it easy to view and navigate large files. Creative Cloud subscribers can try Reader now.

8- Smart Filters: Reimagining what a filter can look like is nothing new, but the implementation of it would make the photo editing task a lot easier. One of such example is the addition of the new Smart Filters feature in Photoshop in 2022. Sean McCabe, vice president and general manager of Creative Experience, explained that the new forward-thinking innovations introduced today at MAX will help photographers and other creative professionals in four distinct ways. First, they will help organize and share their images with greater ease by enabling a collaborative work flow that integrates with other tools and devices. Second, with Share for Review, photos will be organized in one Place, which will be accessible anywhere there is Internet connectivity. Third, bold new features will add power and simplicity to the Photoshop desktop application, so that users will be able to focus on creativity and not on their computer. Finally, with features powered by Adobe Sensei AI, the applications will recognize and adapt to different media, content and output formats, removing the need to take tedious steps to prepare media for workflow. Echoing Flynn’s theme of focusing on the customer, Chris Bell, vice president of professional products, Adobe Photoshop, explained that the innovations being unveiled at MAX are available only as part of the brand-new Adobe Creative Cloud. “Adobe Creative Cloud caters to the unique needs of creative professionals. Our customer-focused approach is what’s driving these new innovations, especially as consumers increasingly create their own content on any device — be it a laptop, tablet or smartphone,” Bell said. “Our goal is to remove the barriers to creativity for our customers, so they can easily and quickly create on any platform, whether they are using a laptop at the office, at home on a tablet or even their mobile device on the go.”
