I was pleased with the accuracy of the information. My problems started with the menus. They are not intuitive to build pictures out of. You must click on the picture to create the picture, then click on the paper. If you order a frame, it must be a blank frame. The program doesn't always do what you want it to. For example, I wanted to have three separate icons for making a picture, a frame, and a hard copy. I created a new frame and it spit out a print. Go figure. I then wanted to insert words into the title or maybe an illustration. The program didn't understand that I was making a picture. I want to share the program with my family because it saves me a lot of time. My brother got it for me as a Christmas present so I do a lot of my work on the side. I do frame pictures but I also do a lot of coloring pictures. I have a class and my students save me a lot of time making announcements, invitations, pictures of our days at school and doctor's office. Now I only have to scan my photos and use another program to create greeting cards. Even though the program is not as easy as the one a computer with a printer takes care of the printing, the price is a very reasonable one. In my office hours we are four hours behind us. Students who are in the college are strangely all in the past and at home and ready for the next day. I think this program is a must have if you have kids who love to color. You can print the layout on your home printer or you can also print the picture automatically using the program's built-in network printer and you can also print the picture with an ink jet or laser printer. I found that it worked with my Brother HL-2170W Laser Printer, which is a Brother branded printer. It also works with the Fry's PrinterPro with a \$50 rebate that Brother has had for a couple of years now. I really like this version.

Since the free version of Lightroom comes with Photoshop Elements, it's the best way to try out all the editing features with the free version of Photoshop Elements and a little bit of the Lightroom editing experience. Although the price tag is a little steep, when I compared my 5400/60 jobs with \$0 net cost in Lightroom and 43 USD/Mb max cost in Photoshop Elements, the price tag is worth it. In the end, you'll probably use only about 30% of Photoshop Elements if you're a beginner and you can get away with that. I've been using Photoshop Elements for editing since the program was released, and I have nothing but great things to say about it. The image data is usually in different formats but they can always be converted to a unified format. GIMP can often assist you if you are trying to do this. With that said, there are some things that GIMP doesn't do well, so it isn't able to convert everything. Many even prefer a tool like PhotoDeluxe for this particular feature. Just like any other photo editing program, you can create images in Photoshop Elements. This is actually pretty easy. First, you will need to choose where you want to save these images is on your computer. If you're working on a Mac, you will need to choose the folder where you want to save the images. If you're working on Windows, you will need to choose the location where you want to save the images on your hard drive. Any software can be used for creative pursuits, but few are easy to use for beginners. Nothing beats the ease-of-use and power that comes with working with Adobe software. You can also use 3D in 2D effects, such as creating a 3D Glow effect or a 3D spin.
