Photoshop 2021 (Version 22.4.2)

The program offers a user-friendly way to share images with social media. You can even set up sharable links on your own web server. You'll need an internet connection to share photos on social media from the program, but there are no Wi-Fi functions. You can't even use the program offline. Excellent app which I use a lot! Muted by occasional incidences of crashing on the iPad. I say incidences because these are very rare. The culprit is always a corrupt file on the iPad. Caused by the in-app continuing to try to open a corrupt file it has already opened. Riffing on what I was saying about Photoshop for Mac what differentiates it from LR is that it is a complete solution. To add a new layer or apply an action requires a new File. To open the image requires a new file. Bringing up a tool bar opens the Quick Fix Tool (Undo levels of editing). Opening a project moves the active document to that project. Even the Preview option moves to a different folder. The only exception which is sometimes useable is the Save To command. There are two new Save options... Saves To Desktop and Snapshot to directory. Snapshot is new for iPad users.
I recommend this app to everyone. I am old and have no problems opening a file to edit and saving. My use case is therefore all the same files and folders and over a Network usually to the Website and back. I am a student and I use CS6 create a lot of documents for my coursework, I like this tool but the key cause I can not perform the work, the bug I find in this is that after opening a document, when I click a paper, the program will crash but the document still open, and I have to close the program, even when I delete the document, the program cannot to open the same document, and I also found that in the menu of this software, sometimes it will close the program when I try to open a

document, I did not use it that often because I love to use Gimp and all work used to say it is complicated, so I am looking for lightweight also not easy to use and not very good. Although I have not tried other Photoshop, but most of the pile of other buggy code, I know that the more powerful I do not need, the more compact file I need, for example, Gimp is a GZ file is less than 1M, because but how many people will use 1M because to provide the powerful feature.
